PROFESSIONAL SUMMARY

Full-stack software engineer with 9 years shipping production web applications, now building **applied AI** products end to end. In personal projects: a **RAG** system and **LangGraph agent with MCP tool calling**, a **Claude API** developer tool with validated structured output, a deployed **AI digital twin** of myself on OpenAI function calling, and a **FastAPI/PostgreSQL** backend on AWS. At work, owns the **Angular/React/TypeScript** frontend architecture and builds the **PHP/Laravel REST API** behind it.

WORK EXPERIENCE

Horizon Oxygen and Medical Equipment (DME Hospice Solutions)

May 2024 - Present

Frontend Software Engineer

Orange, CA - Hybrid

- Owned the frontend architecture of the company portal, the company's primary internal application, building it from scratch (Angular, PrimeNG) with 8+ mission-critical modules (patient management, order processing, inventory, billing, logs, maps) through a zero-blocker production launch on 10+ reusable components; later led a ground-up rewrite of the core dispatch page's state management and UI/UX.
- Shipped client portal features (Next.js, React, TypeScript, Tailwind): the order progress tracker and Patient, Order, and Inventory Maps (Mapbox) with filters and permission-gated CSV export, plus an order-wizard extension; led its UI/branding overhaul on CSS design tokens and reusable components.
- Built and maintained the PHP/Laravel API behind the company portal and client portal (orders, dispatch, Rx, insurance/billing, and inventory), shipping features with PHPUnit feature tests.
- Built real-time updates with Laravel broadcasting over WebSockets, using authorized private channels, to push patient inventory changes and background address-verification results to the UI without a page refresh.
- Strengthened data integrity in the Laravel API with server-side address verification and geocoding across all entry points, order-state guards (blocking duplicate dispatch, requiring cancel/void reasons), and timezone fixes for scheduling and driver assignment.
- Set the team's engineering standards with CI/CD pipelines, pre-commit hooks, branch protections, and automated versioning; led code reviews, authored technical documentation, and mentored teammates.

CoStar Group

Oct 2021 - Jan 2024

Frontend Software Engineer

Irvine, CA - Hybrid

- Developed scalable React, TypeScript, and Redux features as part of a 4-person frontend team (paired with ~5 backend engineers) for enterprise-grade, high-traffic web applications built as microservices, supporting critical real estate workflows.
- Led frontend development for a live bidding-activity dashboard, synchronizing real-time status updates across 5-6 interactive tiles while keeping fast-changing bid data consistent.
- Mentored teammates on a feature area of the codebase; contributed to code reviews, shared UI patterns, and accessibility; worked with PM, QA, and DevOps on CI/CD and testing strategy.

Superior Court of California, County of Orange

Nov 2019 - Oct 2021

Applications Developer

Santa Ana, CA - Hybrid

- Served as sole developer on a full-stack modernization initiative (Angular frontend, .NET Core backend) designed to replace a legacy mainframe system integrated with the California DMV, independently building out core functionality across the frontend and backend.
- Developed and deployed public-facing Angular and NgRx web applications and cross-platform mobile apps (iOS/Android); built and maintained CI/CD pipelines in Azure DevOps for automated testing and deployments of the court's applications to Azure.

Randstad Technologies at Superior Court of California, County of Orange

May 2019 - Nov 2019

Mobile Developer (contract)

Santa Ana, CA - Onsite

- Developed and deployed an Angular and NgRx-based public-facing mobile application for court users (iOS/Android), managing App Store and Play Store deployments.

ustoshop.com

Jun 2018 - Mar 2019

Frontend Developer

- Built user-facing features for web and mobile applications using Angular and Ionic; collaborated with backend engineers on REST API design and data contracts.

Welocalize Life Sciences

Jul 2017 - Jun 2018

Translation Project Manager

- Managed cross-functional localization projects, coordinating timelines, resources, and delivery across multiple stakeholders.

PROJECTS

DocMind - AI Coworker (RAG + Agent + LLMOps) Personal Project

Built a full-stack RAG app: 500-word chunks with 50-word overlap, text-embedding-3-small in ChromaDB, top-5 retrieval, SSE-streamed grounded answers; a LangGraph ReAct agent with MCP tool calling (FastMCP), file-read tool sandboxed against path traversal; Redis semantic caching, LangSmith tracing, and an analytics dashboard.

i18n-ai - AI Code Internationalization Tool Personal Project

Built a VS Code extension and TypeScript engine that refactors hardcoded React UI strings into i18next calls via AST transforms (Babel, recast); its LLM layer runs on the Claude API behind a bring-your-own-key provider abstraction, validates every structured response (placeholders, markup, missing translations, key conflicts), and retries failures once; Vitest unit, SDK contract, and live API tests.

TryHair - AI Hairstyle Try-On iOS App Personal Project

Built a SwiftUI app that restyles hair on the user's selfie with OpenAI's image model (Vision face detection, Sign in with Apple, StoreKit) and its async FastAPI/PostgreSQL backend (SQLAlchemy, Alembic) with server-side entitlement checks; pytest, GitHub Actions CI, Docker deploys to AWS. In App Store review.

Twin - AI Digital Twin of Me Personal Project

Built and deployed a digital version of myself (Gradio, live on Render) that answers questions about my career, skills, and experience, grounded in my LinkedIn profile, with an OpenAI function-calling loop whose tools flag new contacts and unanswerable questions instead of guessing.

EDUCATION

MA, Translation and Localization Management Middlebury Institute of International Studies at Monterey 2015-2017

BA, English (Translation Track) Xiamen University Tan Kah Kee College 2011-2015

CERTIFICATIONS

Deep Learning Specialization	DeepLearning.AI	2026
AWS Certified Cloud Practitioner	Amazon Web Services (AWS)	2024

SKILLS

AI / LLM: Claude API, OpenAI API, tool calling, LangGraph, MCP, RAG, embeddings, ChromaDB, LangSmith, Redis caching, Gradio

Frontend & Mobile: TypeScript, JavaScript, HTML/CSS, Angular, React, Next.js, PrimeNG, Tailwind, Redux, NgRx, RxJS, Ionic, SwiftUI

Backend & Data: Python, FastAPI, pytest, PHP, Laravel, PHPUnit, WebSockets, REST APIs, .NET Core, PostgreSQL, SQLAlchemy

DevOps & Cloud: CI/CD (Azure DevOps, GitHub Actions), Docker, Azure, AWS (EC2, ECR, S3), Render, Claude Code (daily)
